

ASSIGNMENT - 3.5

Name: A.Sai Varshith

Roll Number : 2303A51831

Batch - 04

Question 1: Zero-Shot Prompting (Leap Year Check)

Write a zero-shot prompt to generate a Python function that checks whether a given year is a leap year.

Week2 - Task:

- Record the AI-generated code.
- Test with years like 1900, 2000, 2024.
- Identify logical flaws or missing conditions.

The screenshot shows a code editor interface with a dark theme. In the center, there is a code editor window displaying the following Python code:

```
1  # generate a python function that checks whether a given year is leap year or not
2  def is_leap_year(year):
3      """check if a given year is a leap year.
4
5      A year is a leap year if it is divisible by 4,
6      except for end-of-century years, which must be divisible by 400.
7
8      Args:
9          year (int): The year to check.
10     Returns:
11         bool: True if the year is a leap year, False otherwise.
12     """
13     if (year % 4 == 0 and year % 100 != 0) or (year % 400 == 0):
14         return True
15     else:
16         return False
17     # Example usage:
18     year = 1900
19     if is_leap_year(year):
20         print(f"[year] is a leap year.")
21     else:
22         print(f"[year] is not a leap year.")
23
```

Below the code editor, the terminal output shows the execution of the code for the years 2024 and 1900:

```
2024 is a leap year.
[Done] exited with code=0 in 0.449 seconds
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.python"
2000 is a leap year.
[Done] exited with code=0 in 0.387 seconds
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.python"
1900 is not a leap year.
[Done] exited with code=0 in 0.411 seconds
```

On the right side of the interface, there is a sidebar titled "Ask about your code" with a message: "AI responses may be inaccurate. Generate Agent Instructions to onboard AI onto your codebase." Below this, there is a section titled "Explore and understand your code" with a "Ask" dropdown set to "Auto".

Question 2: One-Shot Prompting (GCD of Two Numbers) Write a one-shot prompt with one example to generate a Python function that finds the Greatest Common Divisor (GCD) of two numbers.

Example:

Input: 12, 18 → Output: 6 Task:

- Compare with a zero-shot solution.
- Analyze algorithm efficiency.

The screenshot shows a code editor interface with multiple tabs. The active tab contains the following Python code:

```
1  """
2  num = 12,18
3  gcd = 6
4  """
5 def compute_gcd(a, b):
6     while b:
7         a, b = b, a % b
8     return a
9 if __name__ == "__main__":
10    a = 12
11    b = 18
12    print("num =", (a, b))
13    print("gcd =", compute_gcd(a, b))
```

Below the code, the terminal output shows the execution of the script:

```
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.py"
num = (12, 18)
gcd = 6

[Done] exited with code=0 in 0.427 seconds
```

A sidebar on the right is titled "Ask about your code" with a message: "AI responses may be inaccurate. Generate Agent Instructions to onboard AI onto your codebase."

Question 3: Few-Shot Prompting (LCM Calculation)

Write a few-shot prompt with multiple examples to generate a Python function that computes the Least Common Multiple (LCM).

Examples:

- Input: 4, 6 → Output: 12
- Input: 5, 10 → Output: 10
- Input: 7, 3 → Output: 21 Task:
- Examine how examples guide formula selection.
- Test edge cases.

The screenshot shows a code editor interface with a dark theme. In the center, there is a code editor window containing the following Python code:

```
1 ...
2 num = 4,6
3 lcm = 12
4 num = 5,6
5 lcm = 30
6 num = 7,3
7 lcm = 21
8 ...
9 def lcm (a, b):
10     if a > b:
11         greater = a
12     else:
13         greater = b
14
15     while True:
16         if greater % a == 0 and greater % b == 0:
17             lcm = greater
18             break
19         greater += 1
20
21     return lcm
```

Below the code editor, the status bar shows the following information:

- PROBLEMS
- OUTPUT
- DEBUG CONSOLE
- TERMINAL
- PORTS

The OUTPUT tab is selected, displaying the following output:

```
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.py"
LCM of 4 and 6 is 12

[Done] exited with code=0 in 0.473 seconds
```

In the top right corner, there is a "CHAT" button and a "Ask about your code" section with the following text:

Ask about your code
AI responses may be inaccurate.
Generate Agent Instructions to onboard AI onto your codebase.

At the bottom right, there is a "Explore and understand your code" panel.

Question 4: Zero-Shot Prompting (Binary to Decimal Conversion) Write a zero-shot prompt to generate a Python function that converts a binary number to decimal.

Task:

- Test with valid and invalid binary inputs.
- Identify missing validation logic.

The screenshot shows a code editor interface with a dark theme. In the center, there is a code editor window containing the following Python code:

```
1 #generate a python function that converts a binary number to decimal
2 def binary_to_decimal(binary_str):
3     decimal_value = 0
4     binary_str = binary_str[::-1] # Reverse the string to process from least significant bit
5     for index, digit in enumerate(binary_str):
6         if digit == '1':
7             decimal_value += 2 ** index
8
9 # Example usage:
10 binary_number = "1101"
11 decimal_number = binary_to_decimal(binary_number)
12 print(f"The decimal value of binary {binary_number} is {decimal_number}")
```

Below the code editor, the status bar shows the following information:

- PROBLEMS
- OUTPUT
- DEBUG CONSOLE
- TERMINAL
- PORTS

The OUTPUT tab is selected, displaying the following output:

```
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.py"
The decimal value of binary 1101 is 13

[Done] exited with code=0 in 0.383 seconds
```

In the top right corner, there is a "CHAT" button and a "Ask about your code" section with the following text:

Ask about your code
AI responses may be inaccurate.
Generate Agent Instructions to onboard AI onto your codebase.

At the bottom right, there is a "Explore and understand your code" panel.

Question 5: One-Shot Prompting (Decimal to Binary Conversion)

Write a one-shot prompt with an example to generate a Python function that converts a decimal number to binary.

Example:

Input: 10 → Output: 1010 Task:

- Compare clarity with zero-shot output.
- Analyze handling of zero and negative numbers.

The screenshot shows a code editor interface with a dark theme. In the top bar, there are tabs for 'File', 'Edit', 'Selection', 'View', 'Go', 'Run', 'Terminal', 'Help', and 'Search'. Below the tabs, there is a code editor window containing the following Python code:

```
# generate a python function that checks Untitled-4 • Untitled-5 • Untitled-6 • #generate a python function that converts Untitled-7 • Untitled-1 • CHAT
1 ...
2 num = 10
3 binary_number = 1010
4 ...
5 def decimal_to_binary(n):
6     if n > 1:
7         decimal_to_binary(n // 2)
8         print(n % 2, end='')
9 num = 10
10 decimal_to_binary(num)
11 |
```

On the right side of the editor, there is a 'CHAT' sidebar with a message bubble icon and the text 'Ask about your code'. Below it, a note says 'AI responses may be inaccurate.' and 'Generate Agent Instructions to onboard AI onto your codebase.'

At the bottom of the editor, there is a 'PROBLEMS' tab, an 'OUTPUT' tab showing '[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempCodeRunnerFile.py"', and a 'TERMINAL' tab showing '[Done] exited with code=0 in 0.446 seconds'.

Question 6: Few-Shot Prompting (Harshad Number Check) Write a few-shot prompt to generate a Python function that checks whether a number is a Harshad (Niven) number.

Examples:

- Input: 18 → Output: Harshad Number
- Input: 21 → Output: Harshad Number
- Input: 19 → Output: Not a Harshad Number Task:
- Test boundary conditions.
- Evaluate robustness

The screenshot shows a code editor interface with a dark theme. In the top-left corner, there's a search bar with the placeholder "Search". The top menu bar includes "File", "Edit", "Selection", "View", "Go", "Run", "Terminal", and "Help". On the right side of the menu bar, there are several tabs labeled "Untitled-4", "Untitled-5", "Untitled-6", "#generate a python fuction that converts", "Untitled-7", "Untitled-1", "Untitled-2", and "CHAT". Below the menu bar, there's a toolbar with icons for file operations like "New", "Open", "Save", etc. A large text area contains the following Python code:

```
4 num = 21
5 print num is Harzard number
6 num = 19
7 print num is not Harzard number
8 """
9 def is_harshad_number(num):
10     digit_sum = sum(int(digit) for digit in str(num))
11     return num % digit_sum == 0
12 if __name__ == "__main__":
13     test_numbers = [18, 21, 19]
14     for num in test_numbers:
15         if is_harshad_number(num):
16             print(f"{num} is Harshad number")
17         else:
18             print(f"{num} is not Harshad number")
19 
```

Below the code editor, there's a "PROBLEMS" tab, an "OUTPUT" tab (which shows the execution log), a "DEBUG CONSOLE", "TERMINAL", and "PORTS" tab. The "OUTPUT" tab contains the following log:

```
[Running] python -u "C:\Users\naksh\AppData\Local\Temp\tempcodeRunnerFile.python"
18 is Harshad number
21 is Harshad number
19 is not Harshad number
```

At the bottom right, there's a "CHAT" section with a "Ask about your code" button and a note: "AI responses may be inaccurate. Generate Agent Instructions to onboard AI onto your codebase." A small tooltip says "Explore and understand your code" over a gear icon.
